#### General problem

Suppose that  $C_p(X)$  and  $C_p(Y)$  are linearly homeomorphic (resp., homeomorphic) and X has a topological property  $\mathcal{P}$ . Does Y have  $\mathcal{P}$ ?

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

#### General problem

Suppose that  $C_p(X)$  and  $C_p(Y)$  are linearly homeomorphic (resp., homeomorphic) and X has a topological property  $\mathcal{P}$ . Does Y have  $\mathcal{P}$ ?

#### Definition

A topological property  $\mathcal{P}$  is called  $\ell$ -invariant (resp., *t*-invariant) if the answer to the above Problem for  $\mathcal{P}$  is 'yes'.

#### General problem

Suppose that  $C_p(X)$  and  $C_p(Y)$  are linearly homeomorphic (resp., homeomorphic) and X has a topological property  $\mathcal{P}$ . Does Y have  $\mathcal{P}$ ?

#### Definition

A topological property  $\mathcal{P}$  is called  $\ell$ -invariant (resp., *t*-invariant) if the answer to the above Problem for  $\mathcal{P}$  is 'yes'.

### Problem (Arhangel'skii, 1982)

Is the Lindelöf property *t*-invariant ( $\ell$ -invariant)?

#### General problem

Suppose that  $C_p(X)$  and  $C_p(Y)$  are linearly homeomorphic (resp., homeomorphic) and X has a topological property  $\mathcal{P}$ . Does Y have  $\mathcal{P}$ ?

#### Definition

A topological property  $\mathcal{P}$  is called  $\ell$ -invariant (resp., *t*-invariant) if the answer to the above Problem for  $\mathcal{P}$  is 'yes'.

## Problem (Arhangel'skii, 1982)

Is the Lindelöf property *t*-invariant ( $\ell$ -invariant)?

## Problem (Arhangel'skii, 198?)

Is the Menger property *t*-invariant ( $\ell$ -invariant)?

#### Definition

A space X is Menger (resp., Hurewicz) if for every sequence  $(\mathcal{U}_n)_{n\in\mathbb{N}}$  of open covers of X, there is a sequence  $(\mathcal{V}_n)_{n\in\mathbb{N}}$  such that for every n,  $\mathcal{V}_n$  is a finite subfamily of  $\mathcal{U}_n$  and the family  $\bigcup_{n\in\mathbb{N}}\mathcal{V}_n$  covers X (resp., every point of X is contained in  $\bigcup \mathcal{V}_n$  for all but finitely many n's).

#### Definition

A space X is Menger (resp., Hurewicz) if for every sequence  $(\mathcal{U}_n)_{n\in\mathbb{N}}$  of open covers of X, there is a sequence  $(\mathcal{V}_n)_{n\in\mathbb{N}}$  such that for every n,  $\mathcal{V}_n$  is a finite subfamily of  $\mathcal{U}_n$  and the family  $\bigcup_{n\in\mathbb{N}}\mathcal{V}_n$  covers X (resp., every point of X is contained in  $\bigcup \mathcal{V}_n$  for all but finitely many n's).

 $\sigma$ -compact  $\Rightarrow$  Hurewicz  $\Rightarrow$  Menger  $\Rightarrow$  Lindelöf.

 $(\forall n \ X^n \text{ is Lindelöf}) \Leftrightarrow C_p(X)$  has countable tightness.

In particular, the property " $(\forall n \ X^n \text{ is Lindelöf})$ " is *t*-invariant

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

 $(\forall n \ X^n \text{ is Lindelöf}) \Leftrightarrow C_p(X)$  has countable tightness.

In particular, the property " $(\forall n \ X^n \text{ is Lindelöf})$ " is *t*-invariant

#### Theorem (Arhangel'skii, 1986)

 $(\forall n \ X^n \text{ is Menger}) \Leftrightarrow C_p(X)$  has countable fan tightness.

In particular, the property " $(\forall n \ X^n \text{ is Menger})$ " is t-invariant

 $(\forall n \ X^n \text{ is Lindelöf}) \Leftrightarrow C_p(X)$  has countable tightness.

In particular, the property " $(\forall n \ X^n \text{ is Lindelöf})$ " is *t*-invariant

#### Theorem (Arhangel'skii, 1986)

 $(\forall n \ X^n \text{ is Menger}) \Leftrightarrow C_p(X)$  has countable fan tightness.

In particular, the property " $(\forall n \ X^n \text{ is Menger})$ " is *t*-invariant

#### Theorem (Velichko, 1998)

The Lindelöf property is  $\ell$ -invariant.

 $(\forall n \ X^n \text{ is Lindelöf}) \Leftrightarrow C_p(X)$  has countable tightness.

In particular, the property " $(\forall n \ X^n \text{ is Lindelöf})$ " is *t*-invariant

#### Theorem (Arhangel'skii, 1986)

 $(\forall n \ X^n \text{ is Menger}) \Leftrightarrow C_p(X)$  has countable fan tightness. In particular, the property " $(\forall n \ X^n \text{ is Menger})$ " is *t*-invariant

#### Theorem (Velichko, 1998)

The Lindelöf property is  $\ell$ -invariant.

#### Theorem (Zdomskyy, 2006)

The Hurewicz property is  $\ell$ -invariant.

property	$\sigma ext{-compact}$	Hurewicz	Menger	Lindelöf
$\ell$ -invariant?				
<i>t</i> -invariant?

The Menger property is  $\ell$ -invariant.

Some partial results were known before:

The Menger property is  $\ell$ -invariant.

Some partial results were known before:

 Zdomskyy, 2006: The Menger property is ℓ-invariant under the set-theoretic assumption u < g</li>

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

The Menger property is  $\ell$ -invariant.

Some partial results were known before:

- Zdomskyy, 2006: The Menger property is ℓ-invariant under the set-theoretic assumption u < g</li>
- 2 Sakai, 2020: The Menger property is ℓ-invariant, for spaces having property (\*).

The Menger property is  $\ell$ -invariant.

Some partial results were known before:

- Zdomskyy, 2006: The Menger property is ℓ-invariant under the set-theoretic assumption u < g</li>
- 2 Sakai, 2020: The Menger property is ℓ-invariant, for spaces having property (\*).

Property (\*) is a weaker form of first-countability.

#### Definition

A space X is projectively Menger (Hurewicz) provided every separable metrizable continuous image of X is Menger (Hurewicz).

#### Definition

A space X is projectively Menger (Hurewicz) provided every separable metrizable continuous image of X is Menger (Hurewicz).

## Proposition (Telgársky, 1984)

A space X is Menger iff X is Lindelöf and projectively Menger.

#### Definition

A space X is projectively Menger (Hurewicz) provided every separable metrizable continuous image of X is Menger (Hurewicz).

## Proposition (Telgársky, 1984)

A space X is Menger iff X is Lindelöf and projectively Menger.

### Proposition (Kočinac, 2006)

A space X is Hurewicz iff X is Lindelöf and projectively Hurewicz.

#### Definition

A space X is projectively Menger (Hurewicz) provided every separable metrizable continuous image of X is Menger (Hurewicz).

## Proposition (Telgársky, 1984)

A space X is Menger iff X is Lindelöf and projectively Menger.

#### Proposition (Kočinac, 2006)

A space X is Hurewicz iff X is Lindelöf and projectively Hurewicz.

Theorem (K.)

The projective Menger property is *l*-invariant

#### Definition

A space X is projectively Menger (Hurewicz) provided every separable metrizable continuous image of X is Menger (Hurewicz).

## Proposition (Telgársky, 1984)

A space X is Menger iff X is Lindelöf and projectively Menger.

### Proposition (Kočinac, 2006)

A space X is Hurewicz iff X is Lindelöf and projectively Hurewicz.

Theorem (K.)

The projective Menger property is *l*-invariant

Theorem (K.)

The projective Hurewicz property is  $\ell$ -invariant
